

Downloading of coach database all sports

Collegesport.us (College Sport ApS) downloads data from the NCAA, NAIA and NJCAA university/colleges staff directory every week. The data is downloaded from the universities' own staff directory websites.

If data is missing in your directory, we will try to find it, but cannot guarantee that this will happen.

Data

The retrieved data will be stored in our main database and from this database we will generate an excel file with the data we have found for each sport, organization, division and gender.

In some cases, there may be challenges in the database. For example, conflicts between male and female coaches' data. For example, if the university does not indicate in their staff directories that they have a female or male team. These can then be included in both the female and male excel file.

We cannot guarantee that all data is present or that the data is up-to-date as we only use data directly from the universities' own websites. So if the University's data is incorrect, there will also be errors in our data.

Contents of the xlsx file

The downloaded file may contain, but does not always contain, the following data:

- Coach name
- Type of coach
- Title
- University name
- Organization
- Conference
- Division
- Email
- Phone

See example below:
